<p>The program was written for friend's task. I spent 4 hours on it. From this simple project, I still learned more knowledge.</p>
<p>I ever realized a 'Stack' class in C++. By using template, I created a generic class. But in C, there is no tool to do it. For each type, I have to realize alone.</p>
<p>This is a C-Free project. You can use C-Free IDE to re-compile it for demo. GNU-GCC compiler is accepted more. This program was wrote by standard C, so you can use any C compiler</p>
<p>This is GCC compiler demo:</p>
<pre>gcc -o main.exe main.c list.c kernel.c</pre>
<p> </p>
<p>In the code, you can add code to support more functionalities.</p>
<p> </p>
<p>Download: [Code(CFREE)]</p>
