GAE和maven用的不多, 使用eclipse3.7

从git fetch之后

参照<https://github.com/b3log/b3log-solo/wiki/Ide> build, 到

7.下载 GAE SDK。右键 solo-gae 项目, Run as → Maven build... → Goals: gae:unpack

时, 报错如下

```
[ERROR] No plugin found for prefix 'gae' in the current project and in the plugin groups [org.pache.maven.plugins, org.codehaus.mojo] available from the repositories [local (C:\Document and Settings\xiao\.m2\repository), m2-release (http://m2-repos.googlecode.com/svn/release) m2-snapshot (http://m2-repos.googlecode.com/svn/snapshot), central (http://repo.maven.apache.org/maven2)] -> [Help 1]
```

```
[ERROR]
```

```
[ERROR] To see the full stack trace of the errors, re-run Maven with the -e switch.
```

```
[ERROR] Re-run Maven using the -X switch to enable full debug logging.
```

应该是找不到eclipse, 下载GAE后直接解压, 环境变量里面设置了GAE_HOME, 没其他设置

请问该如何设置?

多谢!
