<p>追加模块时phpize报错</p>

```
<p>config.m4:138: warning: AC_CACHE_VAL(pdo_inc_path, ...): suspicious cache-id, must cont  
in_cv_ to be cached&nbsp;<br />../lib/autoconf/general.m4:1974: AC_CACHE_VAL is expan  
ed from...&nbsp;<br />../lib/autoconf/general.m4:1994: AC_CACHE_CHECK is expanded fro  
...&nbsp;<br />aclocal.m4:2748: PHP_CHECK_PDO_INCLUDES is expanded from...&nbsp;<br /  
config.m4:138: the top level</p>
```

<p>问题 由于autoconf版本过高</p>

<p>解决办法</p>

```
<p>yum install autoconf213.noarch&nbsp;<br />export PHP_AUTOCONF=/usr/bin/autoconf  
2.13&nbsp;<br />export PHP_AUTOHEADER=/usr/bin/autoheader-2.13</p>
```

<p>&nbsp;</p>

<p>从新phpize即可</p>
