spring配置文件 applicationContext.xml

```
//省略一大段
<!-- 开启扫描 -->
<!-- 重要配置：启用扫描并自动创建代理的功能 -->
<jpa:repositories base-package="me.zonghua.sync.repository"
  transaction-manager-ref="transactionManager"
  entity-manager-factory-ref="entityManagerFactory" />

<!-- 开启注解事务 -->
<!-- <tx:annotation-driven transaction-manager="transactionManager"
  proxy-target-class="true" />
<aop:aspectj-autoproxy /> -->

<tx:annotation-driven transaction-manager="transactionManager"/>
<!-- <aop:config> <aop:pointcut id="txPointcut" expression="execution(*
  me.zonghua..service.*(..))" /> <aop:advisor advice-ref="txAdvice" pointcut-ref="txPoint
ut"
  /> </aop:config> -->
```

TopicServ.java

```
@Transactional
public Page<Topic> getTopicsByType(String type,int page,int size){
  String properties="content";
  Pageable pageRequest=new PageRequest(--page, size, Sort.Direction.DESC, properties);
  Page<Topic> topicPage= topicRepo.findAll(pageRequest);
  for(Topic topic:topicPage.getContent()){
    User lastCommentUser = userRepo.getLastCommentUserByTopicId(topic.getId());
    if(lastCommentUser!=null){
      topic.setLastCommentUser(lastCommentUser);
    }
    Comment lastComment=commentRepo.getLastCommentByTopicId(topic.getId());
    if(lastComment!=null){
      topic.setLastCommentAt(lastComment.getCreateAt());
    }
  }
  return topicPage;
}
```

junit

```
//只有在junit里面加了 @Transactional 才有会话
@Test
public void get(){
  Page<Topic> topicPage=t.getTopicsByType("", 1, 10);
  topicPage.getContent().get(0).getUser().getUsername();
}
```

否则就会报错，没有会话

```

```

看一下事务注解配置有什么问题？

页面上进行多对一或者一对一取值的时候要懒加载或者用过滤器吧会话延长到视图渲染时期
