`lsb_release --help`
FSG `lsb_release v2.0` prints certain LSB (Linux Standard Base) and Distribution information.
Usage: `lsb_release [OPTION]...`
With no OPTION specified defaults to `-v`.
Options:
-v, --version
Display the version of the LSB specification against which the distribution is compliant. 查看版本
-i, --id
Display the string id of the distributor. 经销商标识
-d, --description
Display the single line text description of the distribution. 版本描述信息
-r, --release
Display the release number of the distribution. 发行版本说明
-c, --codename
Display the codename according to the distribution release. 版本号
-a, --all
Display all of the above information. 全部信息
-s, --short
Use short output format for information requested by other options (or version if none). 简
说明
-h, --help
Display this message.
