```
connection error: { [MongoError: connect UNKNOWN 127.0.0.1:27017 - Local (undefined:undefined)]
```

```
name: 'MongoError',
```

```
message: 'connect UNKNOWN 127.0.0.1:27017 - Local (undefined:undefined)' }
```

近日在xp系统 (32bit) 下, 试用了mongoose链接mongodb, 出现了奇怪的MongoError错误, 网说是没启动mongodb的问题,但我通过cmd进入mongo是可以的 (见下图), mongodb版本号3.0.4

```
E:\JELLYCOOL\MongoDB\bin>mongo
MongoDB shell version: 3.0.4
connecting to: test
Server has startup warnings:
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten]
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten] ** NOTE: This is a 32 bit MongoDB binary.
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten] **      32 bit builds are limited to less than 2GB of data (or less with --journal).
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten] **      Note that journaling defaults to off for 32 bit and is currently off.
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten] **      See http://docs.mongodb.org/core/32bit
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten]
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten] ** NOTE: your operating system version does not support the method that MongoDB
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten] **      uses to detect impending page faults.
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten] **      This may result in slower performance for certain use cases
2016-03-24T08:34:09.875+0800 I CONTROL [initandlisten]
> show dbs;
```

这个是mongotest.js代码:

```
var mongoose = require('mongoose');
mongoose.connect('mongodb://localhost/test');
var db = mongoose.connection;
db.on('error', console.error.bind(console, 'connection error:'));
db.once('open', function() {
  console.log('mongoose opened!');
});
```

已运行npm install mongoose --save

不是很熟悉, 哪位能帮忙指点下。
