```
<p>
    几天不用，系统升下级然后虚拟机似乎就挂掉了。。。
</p>
<p>
    问题：
</p>
<pre class="prettyprint lang-bsh">Could not open /dev/vmmon: No such file or directory. Please make sure that the kernel module `vmmon' is loaded.</pre>
解决：
<pre class="prettyprint lang-bsh">sudo vmware-modconfig --console --install-all</pre>
<p>
    看原因是由于显示模块没有加载的问题，不过这样解决似乎有点，简单粗暴。。。。。
</p>
<p>
