*****Role:**

Escalate any issues in advance of them becoming a major problem

Assist the engagement manager to ascertain the technical scope of the engagement for complex systems.

Understand in depth working of the systems from performance perspective so it can be tuned.

Based on the technology in question ensure the correct and extensive monitors are set up to capture all aspects of performance.

Ensure Performance Analysts understand the importance of the monitors and guide how to analyze results.

In depth analysis of the various technology e.g. DB tuning, WAS tuning, network tuning, EAI tuning, Web Server,

Based on the results recommend changes to the code/Non Functional Requirement's infrastructure/configuration, set up to improve the performance and provide the most optimum solution.

Responsible for technical guidance and technical strategy for the engagements and to triage the technical issues with developers

Present the technical optimization to the technical stakeholders to ensure the project team understands the value and impact of the proposed changes.

Attend technical meetings with engagement manager to ensure the team is aware of the progress on outstanding optimization items.

Assist engagement manager to write the technical report with clearly stating the impact and outcome of the tuning exercise

Maintain the engineers' knowledge so these can be shared with other performance engineers.

Be ahead of the technology so the new products/technologies can be PoC'd for acceptance within the bank with performance perspective. e.g. Exadata

Critical intervention for performance problems with production outages and major issues

Perform training and mentoring for junior testers and engineers

Lead and Contribute to service improvement initiatives

Skills:

Excellent Communication skills, Excellent English language skills, Methodical in approach to work. Need to be able to work using own initiative, Excellent Microsoft Office skills, Good meeting management ability and influencing skills. Able to work on own initiative.

Unix, Windows, Databases (SQL and Oracle) - excellent technical skills and knowledge. Excellent testing tools knowledge e.g. Quality Centre, performance testing tools e.g. loadrunner.

Good understanding of architecture and new technologies

Ability to follow a standard process but also identify where improvements can be made*
