在ubuntu下, nginx+jetty, 动态页面和静态页面分开, 配置如下:

```
server {
    listen    80;
    server_name localhost;

    # 静态页面目录
    root /home/workspace/UI;
    index index.html;

    location / {

        # 用户浏览器端的缓存设置
        location ~.*\.(js|css|jpg|jpeg|gif|png|swf|htm|html|json|xml|svg|woff|ttf|eot|map|ico)
        {
            expires 1h;
            if(-f $request_filename){
                break;
            }
        }

        # 动态页面, 转到jetty
        if(!-e $request_filename){
            proxy_pass http://127.0.0.1:8080;
        }

    }
}
```

报错如下:

## Error 404 - Not Found.
