## <!--markdown-->##错误现象

CentOS6.8安装 WDCP v3.0 后发现前台无法打开，后台 phpmyadmin 也无法访问。

检查后发现前台 Apache 启动失败。

手动重启 Apache 服务 `service httpd restart` 提示：

```
Starting httpd: httpd: Syntax error on line 54 of /www/wdlinux/httpd-2.2.22/conf/httpd.conf:
annot load /www/wdlinux/httpd-2.2.22/modules/libphp5.so into server: libmhash.so.2: cannot
open shared object file: No such file or directory
```

[FAILED]

## ##检查原因

估计是安装时某个依赖项没有安装成功，检查安装日志发现如下错误：

```
--2017-02-13 18:30:53-- http://dl.wdlinux.cn/rpms/rpmforge-release-0.5.2-2.el6.rf.x86_64.rpm

Error: Cannot retrieve repository metadata (repomd.xml) for repository: rpmforge. Please verify its path and try again

手动更新yum update也出现如下错误:

```
[root@cloud ~]# yum update
```

```
Loaded plugins: fastestmirror
```

```
Setting up Update Process
```

```
Loading mirror speeds from cached hostfile

Error: Cannot retrieve repository metadata (repomd.xml) for repository: rpmforge. Please verify its path and try again

内容都是<http://apt.sw.be/redhat/el6/en/mirrors-rpmforge>访问失败。

##解决方案

Google后发现改地址已转移至<http://mirrorlist.repoforge.org/el6/mirrors-rpmforge> [[1]][mirrors-rpmforge]

需要修改系统 yum 设置。

进入/etc/yum.repos.d/目录

```
cd /etc/yum.repos.d/
```

修改rpmforge.repo文件

```
vi rpmforge.repo
```

文件原内容大概如下:

```
### Name: RPMforge RPM Repository for RHEL 6 - dag
```

```
### URL: http://rpmforge.net/
```

```
[rpmforge]
name = RHEL $releasever - RPMforge.net - dag
baseurl = http://apt.sw.be/redhat/el6/en/$basearch/rpmforge
mirrorlist = http://apt.sw.be/redhat/el6/en/mirrors-rpmforge
#mirrorlist = file:///etc/yum.repos.d/mirrors-rpmforge
enabled = 1
protect = 0
gpgkey = file:///etc/pki/rpm-gpg/RPM-GPG-KEY-rpmforge-dag
gpgcheck = 1
```

```
[rpmforge-extras]
name = RHEL $releasever - RPMforge.net - extras
baseurl = http://apt.sw.be/redhat/el6/en/$basearch/extras
mirrorlist = http://apt.sw.be/redhat/el6/en/mirrors-rpmforge-extras
#mirrorlist = file:///etc/yum.repos.d/mirrors-rpmforge-extras
enabled = 0
protect = 0
gpgkey = file:///etc/pki/rpm-gpg/RPM-GPG-KEY-rpmforge-dag
gpgcheck = 1
```

```
[rpmforge-testing]
name = RHEL $releasever - RPMforge.net - testing
baseurl = http://apt.sw.be/redhat/el6/en/$basearch/testing
mirrorlist = http://apt.sw.be/redhat/el6/en/mirrors-rpmforge-testing
#mirrorlist = file:///etc/yum.repos.d/mirrors-rpmforge-testing
enabled = 0
protect = 0
gpgkey = file:///etc/pki/rpm-gpg/RPM-GPG-KEY-rpmforge-dag
gpgcheck = 1
```

文件中有三处需要修改:

①

```
mirrorlist = http://apt.sw.be/redhat/el6/en/mirrors-rpmforge-extras
```

修改为

```
mirrorlist = http://mirrorlist.repoforge.org/el6/mirrors-rpmforge
```

②

```
mirrorlist = http://apt.sw.be/redhat/el6/en/mirrors-rpmforge-extras
```

修改为

```
mirrorlist = http://mirrorlist.repoforge.org/el6/mirrors-rpmforge-extras
```

③

```
mirrorlist = http://apt.sw.be/redhat/el6/en/mirrors-rpmforge-testing
```

修改为

```
mirrorlist = http://mirrorlist.repoforge.org/el6/mirrors-rpmforge-testing
```

修改完成后按 Esc 然后保存退出:wq。

再次yum update 即可成功。

由于之前 WDCP 安装过程中出错，所以有些组件没有安装成功，根据错误提示找到安装脚本中的相关内容如下：

```
if [ $v1 == 0 ];then
  RF="lanmp_wdcp-2-5.$arch.rpm";
elif [ $v2 == 0 ];then
  RF="lanmp_wdcp-2-5.el6.$arch.rpm";
  if [ $arch == "x86_64" ];then
    wget -c http://dl.wdlinux.cn/rpms/rpmforge-release-0.5.2-2.el6.rf.x86_64.rpm
    rpm -ivh rpmforge-release-0.5.2-2.el6.rf.x86_64.rpm
  else
    wget -c http://dl.wdlinux.cn/rpms/rpmforge-release-0.5.2-2.el6.rf.i686.rpm
    rpm -ivh rpmforge-release-0.5.2-2.el6.rf.i686.rpm
  fi
  yum install -y mhash-devel libmcrypt-devel
else
  echo
  echo "The current system does not support"
  echo
  exit
```

出错导致mhash-devel与libmcrypt-devel没有安装，手动安装即可：

```
yum install -y mhash-devel libmcrypt-devel
```

安装成功后手动启动前台 Apache 服务：

```
[root@cloud ~]# service httpd start
Starting httpd: [ OK ]
```

启动成功，前台与 phpmyadmin 都能正常打开了。
