```

String[] h = new String[] {"id", "name", "region"};
String[][] d = new String[][] {{"100", "wang", "shanghai"}, {"101", "huang", "beijing"}, {"102", "zhang", "beijing"}, {"103", "li", "shanghai"}};

/* rs2Array(h, d) 期望结果为:
[
{id: "100", name: "wang", region: "shanghai"},
{id: "101", name: "huang", region: "beijing"},
{id: "102", name: "zhang", region: "beijing"},
{id: "103", name: "li", region: "shanghai"}
]
*/

/* rs2MultiHash(h, d, h[0]) 期望结果为:
{
"100": [{id: "100", name: "wang", region: "shanghai"}],
"101": [{id: "101", name: "huang", region: "beijing"}],
"102": [{id: "102", name: "zhang", region: "beijing"}],
"103": [{id: "103", name: "li", region: "shanghai"}]
}
*/

/* rs2MultiHash(h, d, h[2]) 期望结果为:
{
"shanghai": [
{id: "100", name: "wang", region: "shanghai"},
{id: "103", name: "li", region: "shanghai"}
],
"beijing": [
{id: "101", name: "huang", region: "beijing"},
{id: "102", name: "zhang", region: "beijing"}
]
}
*/

```

大牛们。谁有好的思路，我实现的比较死板。thanks。
