话说都要做个nginx的反向代理

之前配置了symphony为root目录，即在tomcat/conf/server.xml里配置了docbase为 symphony

然后配置nginx，这样配置的

```
listen 80;

server_name earnfish.com www.earnfish.com;

index index.html index.htm index.jsp;

root /alidata/server/apache-tomcat-9.0.0.M20/webapps/symphony;

location ~ ^/(html|gif|jpg|jpeg|png|bmp|swf)$ #静态文件找不到.....
{
    root /alidata/server/apache-tomcat-9.0.0.M20/webapps/symphony;
    expires 30d;
}

location ~ ^/(js|css)?$ #静态文件找不到.....
{
    root /alidata/server/apache-tomcat-9.0.0.M20/webapps/symphony;
    expires 1h;
}

location / {
    proxy_pass http://127.0.0.1:8080;
}
```

动态文件访问没问题了，为啥静态文件怎么都访问不到呢？按理说应该到 /alidata/server/apache-tomcat-9.0.0.M20/webapps/symphony目录去找哇，可能是什么问题呢？而且即使写成 earnfish.com symphony/xxx.js也是找不到，nginx到底跑到什么地方去找了呢？

又不能debug，有排查的办法么？

```
