我们在顶部加入

@SuppressWarnings("ResourceType")压制该异常即可正常打包

```
@SuppressWarnings("ResourceType")
@TargetApi(19)
public SystemBarTintManager(Activity activity) {

    Window win = activity.getWindow();
    ViewGroup decorViewGroup = (ViewGroup) win.getDecorView();

    if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.KITKAT) {
        // check theme attrs
        int[] attrs = { android.R.attr.windowTranslucentStatus,
            android.R.attr.windowTranslucentNavigation };
        TypedArray a = activity.obtainStyledAttributes(attrs);
        try {
            mStatusBarAvailable = a.getBoolean(0, false);
            mNavBarAvailable = a.getBoolean(1, false);
        } finally {
            a.recycle();
        }

        // check window flags
        WindowManager.LayoutParams winParams = win.getAttributes();
        int bits = WindowManager.LayoutParams.FLAG_TRANSLUCENT_STATUS;
        if ((winParams.flags & bits) != 0) {
            mStatusBarAvailable = true;
        }
        bits = WindowManager.LayoutParams.FLAG_TRANSLUCENT_NAVIGATION;
        if ((winParams.flags & bits) != 0) {
            mNavBarAvailable = true;
        }
    }

    mConfig = new SystemBarConfig(activity, mStatusBarAvailable,
        mNavBarAvailable);
    // device might not have virtual navigation keys
    if (!mConfig.hasNavigationBar()) {
        mNavBarAvailable = false;
    }

    if (mStatusBarAvailable) {
        setupStatusBarView(activity, decorViewGroup);
    }
    if (mNavBarAvailable) {
        setupNavBarView(activity, decorViewGroup);
    }
}
```
