接口

```
package com.util.redis;
/**
 * Redis工具接口
 */
public interface RedisUtils {
    /**
     * 保存
     * @param key      键
     * @param value    值
     */
    public void set(String key, String value);
    /**
     * 保存并设置存活时间
     * @param key      键
     * @param value    值
     * @param seconds  存活时间，单位为秒
     */
    public void set(String key, String value, Integer seconds);
    /**
     * 根据key查询
     * @param key      键
     * @return 值
     */
    public String get(String key);
    /**
     * 删除
     * @param key      键
     */
    public void del(String key);
    /**
     * 根据key设置存活时间
     * @param key      键
     * @param seconds  存活时间，单位为秒
     */
    public void expire(String key, Integer seconds);
}
```

单机版实现类

```
package com.util.redis.impl;
import org.springframework.beans.factory.annotation.Autowired;
import com.util.redis.RedisUtils;
```

```
import redis.clients.jedis.Jedis;
import redis.clients.jedis.JedisPool;
/**
 * Redis连接池工具类
 */
public class RedisPool implements RedisUtils {
    @Autowired
    private JedisPool jedisPool;
    @Override
    public void set(String key, String value) {
        Jedis jedis = this.getJedis();
        jedis.set(key, value);
        this.releaseJedis(jedis);
    }
    @Override
    public void set(String key, String value, Integer seconds) {
        Jedis jedis = this.getJedis();
        jedis.set(key, value);
        jedis.expire(key, seconds);
        this.releaseJedis(jedis);
    }
    @Override
    public String get(String key) {
        Jedis jedis = this.getJedis();
        String result = jedis.get(key);
        this.releaseJedis(jedis);
        return result;
    }
    @Override
    public void del(String key) {
        Jedis jedis = this.getJedis();
        jedis.del(key);
        this.releaseJedis(jedis);
    }
    @Override
    public void expire(String key, Integer seconds) {
        Jedis jedis = this.getJedis();
        jedis.expire(key, seconds);
        this.releaseJedis(jedis);
    }
    /**
     * 获取Jedis连接
     * @return Jedis连接
     */
    public Jedis getJedis() {
        return this.jedisPool.getResource();
    }
    /**
     * 释放Jedis连接
     * @param jedis
     * jedis连接
     */
    public void releaseJedis(Jedis jedis) {
        jedis.close();
    }
}
```

```
##### 集群版实现类
```

```
package com.util.redis.impl;
import org.springframework.beans.factory.annotation.Autowired;
import com.util.redis.RedisUtils;
import redis.clients.jedis.JedisCluster;
/**
 * Redis集群工具类
 */
public class RedisCluster implements RedisUtils {
    @Autowired
    private JedisCluster jedisCluster;
    @Override
    public void set(String key, String value) {
        this.jedisCluster.set(key, value);
    }
    @Override
    public void set(String key, String value, Integer seconds) {
        this.jedisCluster.set(key, value);
        this.jedisCluster.expire(key, seconds);
    }
    @Override
    public String get(String key) {
        return this.jedisCluster.get(key);
    }
    @Override
    public void del(String key) {
        this.jedisCluster.del(key);
    }
    @Override
    public void expire(String key, Integer seconds) {
        this.jedisCluster.expire(key, seconds);
    }
    /**
     * 获取JedisCluster对象
     * 可以直接使用它来进行redis操作
     * @return JedisCluster对象
     */
    public JedisCluster getJedisCluster() {
        return jedisCluster;
    }
}
```

```
##### redis.properties
```

```
#redis单机版信息
redis.host=192.168.37.131
redis.port=6379
#redis集群版信息
cluster.host1=192.168.37.131
cluster.port1=7001
cluster.host2=192.168.37.131
cluster.port2=7002
```

```
cluster.host3=192.168.37.131
cluster.port3=7003
cluster.host4=192.168.37.131
cluster.port4=7004
cluster.host5=192.168.37.131
cluster.port5=7005
cluster.host6=192.168.37.131
cluster.port6=7006
```

applicationContext-redis.xml

```
<?xml version="1.0" encoding="UTF-8"?>
