在Spring框架下使用filter引起的一个错误

在web.xml配置文件中有如下代码：

```
<filter>
  <filter-name>LoginRequireFilter</filter-name>
  <filter-class>com.liumapp.DNSBee.filter.LoginRequireFilter</filter-class>
  <init-param>
    <param-name>noCheckPath</param-name>
    <param-value>login;register;nav</param-value>
  </init-param>
</filter>
<filter-mapping>
  <filter-name>LoginRequireFilter</filter-name>
  <url-pattern>/*</url-pattern>
</filter-mapping>
```

很简单的登录过滤器，但是在运行时报出

HTTP Status 500 - No thread-bound request found: Are you referring to request attributes outside of an actual web request, or processing a request outside of the originally receiving thread? If you are actually operating within a web request and still receive this message, your code is probably running outside of DispatcherServlet/DispatcherPortlet: In this case, use RequestContextListener or RequestContextFilter to expose the current request.

的错误。

解决办法：

在上面的filter之前加入一段：

```
<listener>
  <listener-class>org.springframework.web.context.request.RequestContextListener</listener-class>
</listener>
```
