由于要经常切换代理，每次打开Internet选项设置实在太麻烦。

使用批处理切换简单方便

1. 设置代理

```
@echo off
cls
color 0A
Echo The program is running...
Echo Setting the proxy
reg add "HKCU\Software\Microsoft\Windows\CurrentVersion\Internet Settings" /v ProxyEnable /t REG_DWORD /d 1 /f
reg add "HKCU\Software\Microsoft\Windows\CurrentVersion\Internet Settings" /v ProxyServer /d "proxy:port" /f
reg add "HKCU\Software\Microsoft\Windows\CurrentVersion\Internet Settings" /v ProxyOverride /d "noproxyaddress1;noproxyaddress2;<local>" /f
Echo Done.
Echo Press any key to leave...
Pause
```

color 0A为窗口颜色

Echo输出语句

ProxyEnable 是否开启代理 1为开启,0关闭

ProxyServer 代理的ip和端口，把proxy:port替换成你的代理ip和端口

ProxyOverride 设置不是使用代理的地址，不需要删除"内内容

2. 关闭代理

```
@echo off
cls
Echo The program is running...
Echo Setting the proxy...
reg add "HKCU\Software\Microsoft\Windows\CurrentVersion\Internet Settings" /v ProxyEnable /t REG_DWORD /d 0 /f
Echo Done.
Pause
```

** 3. 设置TCP/ipv4属性**

```
@echo off
cls
Echo The program is running...
Echo Setting the ip and dns...
cmd /c netsh interface ip set address name="Local Connection" source=static addr=192.168.29 mask=255.255.255.0 gateway=192.168.2.1 gwmetric=1
cmd /c netsh interface ip set dns name="Local Connection" source=static addr=112.124.47.27 primary
cmd /c netsh interface ip add dns name="Local Connection" addr=42.236.82.22 index=2
ipconfig /all
Echo Done.
Pause
```
