deepin是基于debian开发的系统, 但是按照nodejs官网安装最新版本的时候却提示不支持

```
curl -sL https://deb.nodesource.com/setup_8.x | sudo -E bash -
```

```
## Installing the NodeSource Node.js v8.x repo...
```

```
## Populating apt-get cache...
```

```
+ apt-get update
```

```
命中:1 http://packages.deepin.com/deepin panda InRelease
```

```
命中:2 https://deb.nodesource.com/node_8.x jessie InRelease
```

```
正在读取软件包列表... 完成
```

```
## Confirming "unstable" is supported...
```

```
+ curl -sLf -o /dev/null 'https://deb.nodesource.com/node_8.x/dists/unstable/Release'
```

```
## Your distribution, identified as "unstable", is not currently supported, please contact Node source at https://github.com/nodesource/distributions/issues if you think this is incorrect or would like your distribution to be considered for support
```

解决办法是把脚本下载下来, 修改其中一行, 然后在本机上执行脚本

```
wget https://deb.nodesource.com/setup_8.x -O node_8.x.sh
```

```
vi node_8.x.sh
```

```
# 找到DISTRO=$(lsb_release -c -s)这行, 修改为: DISTRO="jessie"
```

```
cat ./Downloads/script.sh | sudo -E bash -
```

```
sudo apt-get install -y nodejs
```
