1, 拉取最新版本, 仍然经常报下面的错误:

```
java.lang.IllegalArgumentException: The character [3] is not valid after a period in a domain name
```

2, 详细异常信息如下:

```
org.apache.coyote.http11.Http11Processor.parseHost The host header [www. 域名.com:8080] failed validation with the error [The character [3] is not valid after a period in a domain name.]. Processing of the request will continue but Tomcat will reject these requests with a 400 response in a future release.
```

Note: further occurrences of HTTP request parsing errors will be logged at DEBUG level.

```
java.lang.IllegalArgumentException: The character [3] is not valid after a period in a domain name.
```
