sql语句如下:

```
SELECT
  a.uc_id id,
  (
    CASE WHEN a.uc_realname IS NULL OR a.uc_realname = ''
      THEN a.uc_sys_name ELSE a.uc_realname END
  ) AS realName,
  a.uc_register_time registerTime,
  a.uc_phone phone,
  a.uc_last_login_time lastLoginTime,
  (
    CASE
      WHEN LEFT (a.uc_code, 2) = '00' THEN
        '地推会员'
      ELSE
        '普通会员'
    END
  ) type,
  (
    CASE
      WHEN a.uc_flag = 0 THEN
        '未确认'
      WHEN a.uc_flag = 1 THEN
        '有效'
      WHEN a.uc_flag = 2 THEN
        '无效'
    END
  ) flagName,
  b.post_status,
  (
    CASE
      WHEN b.post_status IS NULL OR b.post_status = ''
      THEN
        (
          CASE
            WHEN tmp.ctime IS NOT NULL AND tmp.ctime <> ''
            THEN '新投递'
            ELSE '暂无' END
          )
      ELSE
        (
          CASE
            WHEN b.post_status = 0
            THEN '已预约面试'
            WHEN b.post_status = 1
            THEN '面试成功'
            WHEN b.post_status = 2
            THEN '已拒绝'
            WHEN b.post_status = 3
            THEN '已失效'
            ELSE '未知' END
          )
    END
  )
END
```

```

) `status`,
tmp.ctime,
b.memo,
c.realname manageRealName,
c.id manageUseld
FROM
  bco_uc.uc_app_user a
LEFT JOIN bco_web.web_crm_dz b ON a.uc_id = b.app_user_id
LEFT JOIN bco_web.web_manage_user c ON b.manage_user_id=c.id
LEFT JOIN (
  SELECT
    t.uc_id,
    MAX(t1.create_time) ctime
  FROM
    bco_uc.uc_app_user t
  LEFT JOIN bco_jobpost.job_position_apply t1 ON t.uc_id = t1.user_id COLLATE utf8mb4_uni
ode_ci
  WHERE t1.status='draft' GROUP BY t.uc_id
) tmp ON a.uc_id = tmp.uc_id

```

查询结果如下:

id	realName	registerTime	phone	lastLoginTime	type	flagName	post_status	status	ctime
000140036e6340a983f49f	李德丽	2018-06-15 19:47:12		2018-03-31 19:47:30	地推会员	有效		0 新投递	2018-06-06
00017e2b3e5f474a8a5cd1	4567	2018-03-02 06:56:32		2018-04-25	普通会员	有效		0 暂无	(Null)
0002dda8f23a4b919c3e6	蓝友odhndt63	2018-04-04 09:32:45		2018-04-25	普通会员	有效		0 新投递	2018-06-06

有没有发现case when的最外层的判断没有生效，这是为什么？
