Centos7 yum安装php5.5,5.6,7.0,7.1,7.2

查看系统版本

```
lsb_release -a
```

更新之前查看当前PHP版本避免重复更新

```
php -v
```

检查当前PHP的安装包

```
yum list installed | grep php*
```

完全移除当前PHP安装包以免起冲突

```
yum remove php*
```

默认的yum源无法升级PHP，需要添加第三方yum源，我们选择webtatic库

CentOs 5.x

```
rpm -Uvh http://mirror.webtatic.com/yum/el5/latest.rpm
```

CentOs 6.x

```
rpm -Uvh http://mirror.webtatic.com/yum/el6/latest.rpm
```

CentOs 7.X任选一组就行

```
rpm -Uvh https://mirror.webtatic.com/yum/el7/epel-release.rpm
```

```
rpm -Uvh https://mirror.webtatic.com/yum/el7/webtatic-release.rpm
```

```
rpm -Uvh https://dl.fedoraproject.org/pub/epel/epel-release-latest-7.noarch.rpm
```

```
rpm -Uvh https://mirror.webtatic.com/yum/el7/webtatic-release.rpm
```

安装php

1.查看yum源是否有php7.1安装包

```
yum list php71*
```

2.安装php及相关插件

3.查看当前php版本

```
php -v
```

安装php5.5

```
yum install php55w.x86_64 php55w-cli.x86_64 php55w-common.x86_64 php55w-gd.x86_64  
php55w-ldap.x86_64 php55w-mbstring.x86_64 php55w-mcrypt.x86_64 php55w-mysql.x86_64  
php55w-pdo.x86_64 php55w-fpm
```

安装php5.6

```
yum install php56w.x86_64 php56w-cli.x86_64 php56w-common.x86_64 php56w-gd.x86_64 p  
hp56w-ldap.x86_64 php56w-mbstring.x86_64 php56w-mcrypt.x86_64 php56w-mysql.x86_64 p  
hp56w-pdo.x86_64 php56w-fpm
```

安装php7.0

```
yum install -y php70w.x86_64 php70w-cli.x86_64 php70w-common.x86_64 php70w-gd.x86_64  
php70w-ldap.x86_64 php70w-mbstring.x86_64 php70w-mcrypt.x86_64 php70w-mysql.x86_64  
php70w-pdo.x86_64 php70w-fpm
```

其他版本php安装

如果想安装php5.5或者5.6版本，将上面的php70w替换为php55w或者php56w就可以了。

安装php7.1

```
yum install -y php71w-fpm php71w-opcache php71w-cli php71w-gd php71w-imap php71w  
mysqlnd php71w-mbstring php71w-mcrypt php71w-pdo php71w-pecl-apcu php71w-pecl-m  
ngodb php71w-pecl-redis php71w-pgsql php71w-xml php71w-xmlrpc php71w-devel mod_p  
hp71w
```

安装php7.2

```
rpm -Uvh https://dl.fedoraproject.org/pub/epel/epel-release-latest-7.noarch.rpm  
rpm -Uvh https://mirror.webtatic.com/yum/el7/webtatic-release.rpm
```

```
yum -y install php72w php72w-cli php72w-common php72w-devel php72w-embedded php7  
w-fpm php72w-gd php72w-mbstring php72w-mysqlnd php72w-opcache php72w-pdo php7  
w-xml
```

-

1. php 5.3开始使用mysqlnd作为的默认mysql访问驱动

-

2. 从PHP5.3开始Zend Guard将取代Zend Optimizer~下载安装Zend Guard，实际上不用装Zend Guard了直接下载LOADER就可以了，下好之后扔进usr/local/zend/ 修改php.ini就可以了~和以前的Zend Optimizer一样。
