

链滴

pipe 安装失败

作者: [hysg](#)

我的pipe.json配置:

```
{
  "Server": "https://www.hysg.top",
  "StaticServer": "https://static.hysg.top",
  "StaticResourceVersion": "1536717883254",
  "OpenRegister": false,
  "RuntimeMode": "pro",
  "LogLevel": "debug",
  "ShowSQL": false,
  "SessionSecret": "pipe",
  "SessionMaxAge": 86400,
  "SQLite": "",
  "MySQL": "pipe:4adQ123@(127.0.0.1:3306)/pipe?charset=utf8mb4&parseTime=True&loc=Local",
  "StaticRoot": "",
  "Port": "5897",
  "AxiosBaseURL": "/api",
  "MockServer": "http://127.0.0.1:8888"
}
```

我的nginx配置:

```
upstream pipe {
  server 127.0.0.1:5897;
}

server {
  listen 443 http2;
  server_name www.hysg.top;

  location / {
    proxy_pass http://pipe$request_uri;
    proxy_set_header Host $host:$server_port;
    proxy_set_header X-Real-IP $remote_addr;
    client_max_body_size 10m;
  }
}
```

现在问题是一个js文件的链接是

http://localhost:5897/console/dist/pages_admin_index.be50d5f98378b5e68985.js

然后pipe安装不成功, 该怎么排除这个错误?
