*一、第一种方式:

1、编写一个支持跨域请求的 Configuration

```
/**  
 * @author ChenXc  
 * @version V1.0  
 * @Date 2018/3/22 17:25  
 * @Description TODO(跨域支持)  
 */  
  
@Configuration  
  
public class CorsConfig extends WebMvcConfigurerAdapter {  
  
    @Override  
  
    public void addCorsMappings(CorsRegistry registry) {  
        registry.addMapping("/**")  
            .allowedOrigins("*")  
            .allowCredentials(true)  
            .allowedMethods("GET", "POST", "PUT", "DELETE", "OPTIONS")  
            .maxAge(3600);  
    }  
}
```

二、第二种方式（推荐）

第一种存在一个问题，当服务器抛出 500 的时候依旧存在跨域问题

```
@SpringBootApplication  
  
@ComponentScan  
  
@EnableDiscoveryClient  
  
public class ManagementApplication {  
  
    public static void main(String[] args){  
        SpringApplication.run(ManagementApplication.class, args);  
    }  
}
```

```

}

private CorsConfiguration buildConfig() {

CorsConfiguration corsConfiguration = new CorsConfiguration();
corsConfiguration.addAllowedOrigin("");
corsConfiguration.addAllowedHeader("*");
corsConfiguration.addAllowedMethod("*");
corsConfiguration.addExposedHeader(HttpHeaderConStant.X_TOTAL_COUNT);
return corsConfiguration;

}
/** * 跨域过滤器 * * @return */

@Bean

public CorsFilter corsFilter() {

UrlBasedCorsConfigurationSource source = new UrlBasedCorsConfigurationSource();
source.registerCorsConfiguration("/**", buildConfig());
return new CorsFilter(source);

}
}

```

三、第三种方式，编写Filter过滤器

```

@Component
public class OriginFilter implements Filter {
@Override
public void init(FilterConfig filterConfig) throws ServletException {
}
@Override
public void doFilter(ServletRequest req, ServletResponse res, FilterChain chain) throws IOException, ServletException {
HttpServletResponse response = (HttpServletResponse) res;
response.setHeader("Access-Control-Allow-Origin", "*");
response.setHeader("Access-Control-Allow-Methods", "POST, GET, OPTIONS, DELETE, PUT");
response.setHeader("Access-Control-Max-Age", "3600");
response.setHeader("Access-Control-Allow-Headers", "x-requested-with");
chain.doFilter(req, res); }
@Override
public void destroy() {
// TODO Auto-generated method stub
}
}

```
