调用jbox的jsp 页面:

```
<td>
  <a href="javascript:void(0)" class="offer-process-audit" data-id="{tradeStatementReport.
radeSubmit.id}">${tradeStatementReport.tradeSubmit.innerTradeNo}</a>
</td>
```

js 方法:

```
$(document).ready(function() {
  //查询对账明细
  $(".offer-process-audit").bind('click',function(){
    var tradeSubmitId = $(this).data('id');
    top.$.jBox("iframe:"+ctx+"/trade/tradeStatementReport/details?tradeSubmitId="+tra
eSubmitId,{
      width: 900,
      height: 300,
      title: "交易明细:编号"+$(this).text(),
      buttons: { '关闭':true }
    });
  });
});
```

controller 方法:

```
@RequiresPermissions("trade:tradeStatementReport:view")
@RequestMapping(value = "details")
public String details(String tradeSubmitId, HttpServletRequest request, HttpServletResponse r
sponse, Model model) {
  TradeSubmit tradeSubmit = new TradeSubmit();
  tradeSubmit.setId(tradeSubmitId);
  TradeSubmitItem tradeSubmitItem = new TradeSubmitItem();
  tradeSubmitItem.setTradeSubmit(tradeSubmit);
  Page<TradeSubmitItem> page = tradeSubmitItemService.findPage(new Page<TradeSubmi
Item>(request, response), tradeSubmitItem);
  model.addAttribute("page", page);
  return "modules/trade/tradeSubmitItemList";
}
```

备注:

controller返回的jsp界面和 jeesite传统的list界面一样
