今天一台windows服务器上的程序异常，通过排查了解到是mysql的密码过期了。报错信息如下：

英文ERROR我都写下来了，方便小伙伴们百度，哈哈.....

1862 - Your password has expired. To log in you must change it using a client that supports expired password.

以下是我网上搜索到的一些解决方法

```
update mysql.user set password_expired='N' where user='root';
```

```
update mysql.user set password=password("123456") where user='root'
```

```
update mysql.user set authentication_string=password('123456') where user='root' ;
```

```
update user set host = '%' where host = 'oracle' and user = 'root';
```

然而...并没有什么卵用（对于我当前的情况，也许对别的情况有用也说不定呢~~）

下面就来说说我的解决方法

1.ctrl+R 输入cmd 打开命令提示符

2.输入mysql -uroot -p (若提示mysql命令不可用,请到安装目录Bin下执行)

```
C:\Program Files\MySQL\MySQL Server 5.7\bin>mysql -uroot -p
```

3.输入密码登录

```
Enter password: *****
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 3
Server version: 5.7.9-log

affiliates. Other names may be trademarks of their respective
owners.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.
```

4.修改登录密码，若有需要再次执行改回原密码
set password = password('123456')

```
mysql> set password = password('123456');  
Query OK, 0 rows affected, 1 warning (0.00 sec)
```

5.连接测试，连接成功~~
