```
public class DeadLock {
private static Object lock1 = ``new Object();
private static Object lock2 = ``new Object();
public static void main(String[] args) {
new Thread() {
@Override
public void run() {
synchronized (lock1) {
System.out.println(``thread1 get lock1``);
try {
Thread.sleep(100);
} ``catch (InterruptedException e) {
e.printStackTrace();
}
synchronized (lock2) {
System.out.println(``thread1 get lock2``);
}
}
System.out.println(``thread1 end``);
}
}.start();
new Thread() {
@Override
public void run() {
synchronized (lock2) {
System.out.println(``thread2 get lock2``);
try {
Thread.sleep(100);
```

```
} ``catch (InterruptedException e) {  
e.printStackTrace();  
}  
synchronized (lock1) {  
System.out.println(``thread2 get lock1``);  
}  
}  
System.out.println(``thread2 end``);  
}  
}.start();  
}  
}
```
