我将latke-demo项目运行起来,访问<http://localhost:8080/register> 添加数据时, 程序出现如下异常

```
[ERROR]-[2018-12-04 14:50:45]-[org.b3log.latke.demo.service.UserService:37]: Saves user failed
org.b3log.latke.repository.RepositoryException: Invoking add() outside a transaction
    at org.b3log.latke.repository.jdbc.JdbcRepository.add(JdbcRepository.java:137)
    at org.b3log.latke.repository.AbstractRepository.add(AbstractRepository.java:110)
    at org.b3log.latke.demo.service.UserService.saveUser(UserService.java:35)
    at org.b3log.latke.demo.processor.RegisterProcessor.register(RegisterProcessor.java:39) <4 internal calls>
    at org.b3log.latke.servlet.handler.MethodInvokeHandler.handle(MethodInvokeHandler.java:55)
    at org.b3log.latke.servlet.HttpControl.nextHandler(HttpControl.java:97)
    at org.b3log.latke.servlet.handler.AdviceHandler.handle(AdviceHandler.java:104)
    at org.b3log.latke.servlet.HttpControl.nextHandler(HttpControl.java:97)
    at org.b3log.latke.servlet.handler.ArgsHandler.handle(ArgsHandler.java:59)
```

我断点进入JdbcRepository的add方法里面的变量currentTransaction为null, 说明没有获取到事务。  
于是, 我就手动添加事务给该方法, 如下图

```
try {
    Transaction transaction = userRepository.beginTransaction();
    userId = userRepository.add(user);
    transaction.commit();
} catch (final RepositoryException e) {
    LOGGER.log(Level.ERROR, msg: "Saves user failed", e);
}
```

在userRepository.add(user)上面手动创建事务Transaction transaction = userRepository.beginTransaction();

并手动提交事务transaction.commit();

此时就能够成功插入数据到数据库,

我想知道是什么原因导致注解事务@Transactional没有生效呢

**我使用的数据库是mysql5.7**
