# 背景

打的包多了，想知道某个环境下部署的是哪个版本的包。

## 初体验

### 安装插件

```
<plugin>
  <groupId>pl.project13.maven</groupId>
  <artifactId>git-commit-id-plugin</artifactId>
  <version>2.2.5</version>
  <executions>
    <execution>
      <goals>
        <goal>revision</goal>
      </goals>
    </execution>
  </executions>
  <configuration>
    <dotGitDirectory>${project.basedir}/.git</dotGitDirectory>
  </configuration>
</plugin>
```

### 完整版本

```
<plugin>
  <groupId>pl.project13.maven</groupId>
  <artifactId>git-commit-id-plugin</artifactId>
  <version>2.2.5</version>
  <executions>
    <execution>
      <id>get-the-git-infos</id>
      <goals>
        <goal>revision</goal>
      </goals>
    </execution>
  </executions>
  <configuration>
    <dotGitDirectory>${project.basedir}/.git</dotGitDirectory>
    <prefix>git</prefix>
    <verbose>>false</verbose>
    <generateGitPropertiesFile>>true</generateGitPropertiesFile>
    <generateGitPropertiesFilename>${project.build.outputDirectory}/git.properties</generateGitPropertiesFilename>
    <format>json</format>
    <gitDescribe>
      <skip>>false</skip>
      <always>>false</always>
      <dirty>-dirty</dirty>
    </gitDescribe>
  </configuration>
```

```
</plugin>
```

## 使用

```
mvn clean package
```

## 效果

```
less ./project/target/classes/git.properties
```
