docker.io仓库对google的容器做了镜像，可以通过下列命令下拉取相关镜像：

```
docker pull mirrorgooglecontainers/kube-apiserver-amd64:v1.11.3
```

```
docker pull mirrorgooglecontainers/kube-controller-manager-amd64:v1.11.3
```

```
docker pull mirrorgooglecontainers/kube-scheduler-amd64:v1.11.3
```

```
docker pull mirrorgooglecontainers/kube-proxy-amd64:v1.11.3
```

```
docker pull mirrorgooglecontainers/pause:3.1
```

```
docker pull mirrorgooglecontainers/etcd-amd64:3.2.18
```

```
docker pull coredns/coredns:1.1.3
```

```
docker tag docker.io/mirrorgooglecontainers/kube-proxy-amd64:v1.11.3 k8s.gcr.io/kube-proxy-amd64:v1.11.3
```

```
docker tag docker.io/mirrorgooglecontainers/kube-scheduler-amd64:v1.11.3 k8s.gcr.io/kube-scheduler-amd64:v1.11.3
```

```
docker tag docker.io/mirrorgooglecontainers/kube-apiserver-amd64:v1.11.3 k8s.gcr.io/kube-apiserver-amd64:v1.11.3
```

```
docker tag docker.io/mirrorgooglecontainers/kube-controller-manager-amd64:v1.11.3 k8s.gcr.io/kube-controller-manager-amd64:v1.11.3
```

```
docker tag docker.io/mirrorgooglecontainers/etcd-amd64:3.2.18 k8s.gcr.io/etcd-amd64:3.2.18
```

```
docker tag docker.io/mirrorgooglecontainers/pause:3.1 k8s.gcr.io/pause:3.1
```

```
docker tag docker.io/coredns/coredns:1.1.3 k8s.gcr.io/coredns:1.1.3
```

也可以将上述镜像推送到私库中
