## mongodb查询指定字段

```
@Test
public void fun1() {

    DBObject fieldsObject = new BasicDBObject();
    fieldsObject.put("_id", true);
    fieldsObject.put("name", true);
    fieldsObject.put("code", true);
    fieldsObject.put("marketPrice", true);

    BasicDBObject dbObject = new BasicDBObject();
    fieldsObject.put("productId", "PD329321375342788608");

    Query query = new BasicQuery(dbObject,fieldsObject);

    List<Goods> goodsList = mongoTemplate.find(query, Goods.class);
    String gson = new Gson().toJson(goodsList);
    System.out.println(gson);
}
```
