etcdctl v3命令行工具

设置环境变量

```
export ETCDCTL_API=3  
export ETCDCTL_ENDPOINTS=http://etcd.liishuang.cn:2379
```

- 注意: 客户端使用的--endpoints地址是grpc-proxy的--listen-addr地址

version

```
./etcdctl version  
etcdctl version: 3.3.0  
API version: 3.3
```

lease 租约

- 租约具有生命周期,需要为租约授予一个TTL (time to live)
- 将租约绑定到一个key上,那么key的生命周期与租约所授予的TTL一致
- 可续租
- 可撤销租约

etcdctl lease grant <ttl>

取一份租约

```
./etcdctl lease grant 30  
lease 2ccc684b35cb7c0f granted with TTL(30s)
```

- 租约的编号为2ccc684b35cb7c0f
- 租约的TTL为30s
- 在30s过后这个租约将消失,所绑定的key也会消失

etcdctl lease list 列出所有租约

```
./etcdctl lease list  
found 2 leases  
2ccc684b35cb7c1c  
2ccc684b35cb7c1e
```

etcdctl lease timetolive <leaseID>

[options] 租约的剩余生命

--keys 绑定到这个租约上的所有key

```
./etcdctl lease timetolive 2ccc684b35cb7c1e  
"etcdctl常用命令.md" [noeol] 637L, 17723C
```

KV Read:

KV Write:

``

- user passwd // 修改用户密码

 etcdctl user passwd \<user name\> [options] `只有root用户才有修改其他用户码的权限`

``bash

// 使用--user选项切换到root用户,修改cowant用户的密码

./etcdctl --user=root:1e2a92068bffef22387e3414692b2bd6 user passwd cowant

Password of cowant:

Type password of cowant again for confirmation:

Password updated

```
```
- user remove // 删除用户
 /etcctl user delete <user name>
```bash
// 删除用户的操作也只能由root用户完成
./etcctl --user=root:1e2a92068bffef22387e3414692b2bd6 user delete cowant
User cowant deleted
```

- user grant-role // 授予用户一个角色
 /etcctl user grant-role <user name> <role name>
```bash
// 授予AAAA用户xxxx角色
./etcctl --user=root:1e2a92068bffef22387e3414692b2bd6 user grant-role AAAA xxxx
Role xxxx is granted to user AAAA

// 查看AAAA用户的角色
./etcctl --user=root:1e2a92068bffef22387e3414692b2bd6 user get AAAA
User: AAAA
Roles: xxxx
```

- user revoke-role // 撤销用户一个角色
 /etcctl user revoke-role <user name> <role name>
```bash
// 授予AAAA用户xxxx角色
./etcctl --user=root:1e2a92068bffef22387e3414692b2bd6 user revoke-role AAAA xxxx
Role xxxx is revoked from user AAAA
./etcctl --user=root:1e2a92068bffef22387e3414692b2bd6 user get AAAA
User: AAAA
Roles:
```
```
