```
#!/bin/bash
path=$3
downloadpath='/data/aria2/Download'
#aria2 下载目录
if [ $2 -eq 0 ]
then
exit 0
fi
while true; do
filepath=$path
path=${path%/*};
if [ "$path" = "$downloadpath" ] && [ $2 -eq 1 ]
then
/usr/local/php/bin/php /data/wwwroot/pan.2333.blog/one.php upload:file "$filepath" /upload/
rm -rf "$filepath"
exit 0
elif [ "$path" = "$downloadpath" ]
then
/usr/local/php/bin/php /data/wwwroot/pan.2333.blog/one.php upload:folder "$filepath" /upload/"${filepath##*/}"/
rm -rf "$filepath"/
exit 0
fi
done``
```

修改 aria2.conf 中的下载目录，在配置文件末尾添加一行

```
`on-download-complete=/root/upload2one.sh`
```

chmod +x /root/upload2one.sh 赋予 upload2one.sh 权限

重启 Aria2 服务端
