快速配置Homebrew加速更新下载

安装homebrew

首先确保你已经安装好了 Homebrew 了, 如果没有, 请参考 OPSX 指引页的 Homebrew 文档;

然后你只需要粘贴下述命令在对应终端运行.

```
/usr/bin/ruby -e "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install)"
```

使用 Homebrew 安装 Apple 没有预装但你需要的东西。

Homebrew 会将软件包安装到独立目录, 并将其文件软链接至/usr/local。

详情参考[Homebrew](#)

Bash 终端配置

```
# 替换brew.git:  
cd "$(brew --repo)"  
git remote set-url origin https://mirrors.aliyun.com/homebrew/brew.git  
# 替换homebrew-core.git:  
cd "$(brew --repo)/Library/Taps/homebrew/homebrew-core"  
git remote set-url origin https://mirrors.aliyun.com/homebrew/homebrew-core.git  
# 应用生效  
brew update  
# 替换homebrew-bottles:  
echo 'export HOMEBREW_BOTTLE_DOMAIN=https://mirrors.aliyun.com/homebrew/homebrew-bottles' >> ~/.bash_profile  
source ~/.bash_profile
```

Zsh 终端配置

```
# 替换brew.git:  
cd "$(brew --repo)"  
git remote set-url origin https://mirrors.aliyun.com/homebrew/brew.git  
# 替换homebrew-core.git:  
cd "$(brew --repo)/Library/Taps/homebrew/homebrew-core"  
git remote set-url origin https://mirrors.aliyun.com/homebrew/homebrew-core.git  
# 应用生效  
brew update  
# 替换homebrew-bottles:  
echo 'export HOMEBREW_BOTTLE_DOMAIN=https://mirrors.aliyun.com/homebrew/homebrew-bottles' >> ~/.zshrc  
source ~/.zshrc
```

恢复默认配置

出于某些场景, 可能需要回退到默认配置, 你可以通过下述方式回退到默认配置.

首先执行下述命令:

```
# 重置brew.git:  
$ cd "$(brew --repo)"  
$ git remote set-url origin https://github.com/Homebrew/brew.git  
# 重置homebrew-core.git:  
$ cd "$(brew --repo)/Library/Taps/homebrew/homebrew-core"  
$ git remote set-url origin https://github.com/Homebrew/homebrew-core.git
```

然后删掉 `HOMEBREW_BOTTLE_DOMAIN` 环境变量, 将你终端文件

`~/.bash_profile`

或者

`~/.zshrc`

中

`HOMEBREW_BOTTLE_DOMAIN`

行删掉, 并执行

`source ~/.bash_profile`

或者

`source ~/.zshrc`
