tomcat

见[阿里云 ECS+CADDY+TOMCAT+MYSQL 搭建 SOLO 博客](#)

准备

- 安装maven `apt-get install maven`
- 安装git `apt-get install maven`
- 克隆项目

```
mkdir ~/priject
cd ~/priject/
git clone https://github.com/b3log/solo.git
```

- 备份配置

```
cd solo
src/main/resources/local.properties ~/priject/previous/resources/
src/main/resources/latke.properties ~/priject/previous/resources/
```

部署

- 更新代码

```
cd ~/priject/solo
git stash
git pull
```

- 打包

```
cp ~/priject/previous/resources/* src/main/resources/
mvn package
```

- 发布

```
mv ~/priject/previous/solo/* /tmp
mv /opt/tomcat/webapps/solo/* ~/priject/previous/solo/
mv target/solo.war /opt/tomcat/webapps/solo/
cd /opt/tomcat/webapps/solo/
chown -R tomcat:tomcat solo.war
jar -xvf solo.war
```

- 重启tomcat

```
systemctl restart tomcat
```

自动

打开[vim /etc/crontab](#)添加

```
30 2 * * 1 root cd /root/priject && ./deploy.sh
```
