docker日志:

```
[root@cjz ~]# docker logs pipe
```

```
D 2019/05/22 10:27:08 confs.go:137: ${home} [/root]
D 2019/05/22 10:27:08 confs.go:155: ${time} [1558492028815005012]
D 2019/05/22 10:27:08 confs.go:190: configurations [&model.Configuration{Server:"http://blo
.cjzshilong.cn:5897", StaticServer:"http://blog.cjzshilong.cn:5897", StaticResourceVersion:"155
286834435", LogLevel:"debug", ShowSQL:false, SessionSecret:"YI9JEY27vRrhoNyp7mzs3E5jyY
DKg7", SessionMaxAge:86400, RuntimeMode:"prod", SQLite:"", MySQL:"pipe:pipe@(127.0.0.1:
306)/pipe?charset=utf8mb4&parseTime=True&loc=Local", Port:"5897", AxiosBaseURL:"/api",
MockServer:"http://localhost:8888"}]
I 2019/05/22 10:27:08 markdowns.go:59: [markdown-http] is not available, uses built-in [black
riday] for markdown processing
D 2019/05/22 10:27:08 themes.go:49: loaded [7] themes
D 2019/05/22 10:27:08 db.go:53: used [MySQL] as underlying database
I 2019/05/22 10:27:09 main.go:80: Pipe (v1.8.9) is running [http://blog.cjzshilong.cn:5897]
```

端口已经启动:

```
[root@cjz ~]# netstat -antup | grep 5897
```

```
tcp6      0      0 :::5897          :::*              LISTEN      30606/pipe
```

nginx没配置反代, 带端口访问不行:

```
server {
    listen      80;
    server_name blog.cjzshilong.cn;

    location / {
        root    html;
        index  index.html index.htm;
    }
}
```
