\latke\latke-core\src\main\java\org\b3log\latke\servlet\DispatcherServlet.java中有如下代码, 问"writeReplace"这个是什么用法, 为啥clazz会有"writeReplace"方法?

```
public Router handler(final ContextHandler handler) {
    this.handler = handler;
    final Class clazz = handler.getClass();
    try {
        final Serializable lambda = handler;
        final Method m = clazz.getDeclaredMethod("writeReplace");
        m.setAccessible(true);
        final SerializedLambda sl = (SerializedLambda) m.invoke(lambda);
        final String implClassName = sl.getImplClass().replaceAll("/", ".");
        final Class<?> implClass = Class.forName(implClassName);
        this.method = implClass.getDeclaredMethod(sl.getImplMethodName(), RequestCon
ext.class);
    } catch (final Exception e) {
        LOGGER.log(Level.ERROR, "Found lambda method reference impl method failed", e)
    }

    return this;
}
```
