记vscode配置golang的坑

1. 安装go

```
brew install go
```

2. bash_profile

设置mod开启+代理+bin就够了

```
export GO111MODULE=on
```

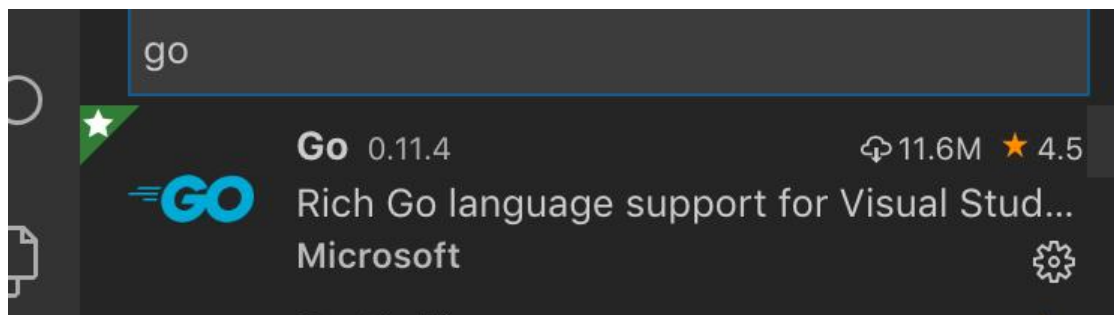

```
export GOPROXY=https://goproxy.io
```

```
export GOBIN=/Users/ferried/go/bin
```

```
export PATH=$PATH:$GOPROXY:$GOBIN
```

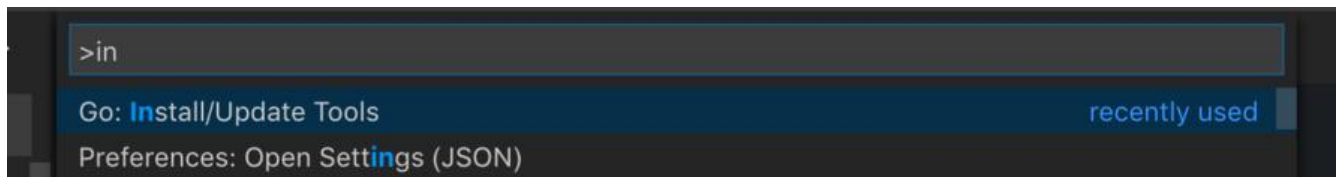

3. vscode

安装插件

不要点右下角弹出来的install

输入command

最后喝茶到安装完毕
