1. write the backup shell script, as follow:

```
#!/bin/bash

MONGODB_BACKUP_DIR="/data/bak/"

cd $MONGODB_BACKUP_DIR

mongodump --host 127.0.0.1 --port 18081 --username admin --password "password@169.c
m&" --out ./mongodump-`date +%F`

tar -czf mongodump-`date +%F`.tgz ./mongodump-`date +%F`/

rm -rf ./mongodump-`date +%F`/

find . -type f -name '*.tgz' -mtime +30 -print0 | xargs -0 /bin/rm -f

# cd $MONGODB_BACKUP_DIR;tar -xf mongodump-`date +%F`.tgz
# mongorestore --host 127.0.0.1 --port 18081 --username admin --authenticationDatabase=
dmin /opt/backup/mongodump-2011-10-24
# /bin/bash /data/solution/mongodb3.6/mongo_backup.sh
```

2. set the crontab, every day at 3,am, exec the shell script:

**crontab -e**

```
* 3 * * * /bin/bash /data/mongo_backup.sh
```
