2. 常用命令

Common parameters

Lynis is started with at least one command, usually followed by one or more options.

Example Commands

Command	Description
audit system	Perform a system audit
show commands	Show available Lynis commands
show help	Provide a help screen
show profiles	Display discovered profiles
show settings	List all active settings from profiles
show version	Display current Lynis version

The `*show*` command requires an up-to-date version of Lynis.

Options

Option	Abbreviated	Description
--auditor "Given name Surname"		Assign an auditor name to the audit (report)
--cronjob		Run Lynis as cronjob (includes -c -Q)
--debug		Show debug information, useful for troubleshooting and development
--help	-h	Shows valid parameters
--man-page		View man page
--no-colors		Do not use any colors
--pentest		Perform a penetration test scan (non-privileged)
--quick	-Q	Don't wait for user input, except on errors
--quiet	-q	Only show warnings (includes --quick, but doesn't wait)
--reverse-colors		Use a different color scheme for lighter backgrounds
--verbose		Show more screen output

Tips

* If Lynis is not installed as package (with included man page), use `**--man**` or `**nroff -man . lynis.8**`

* For systems where the shell background is light, use `**--nocolors**` or `**--reverse-colors**`

* Use command `**show options**` to see all available parameters of Lynis

3. report

During the audit process, Lynis will gather findings and other data points. This information is stored in the report file, which is by default `**/var/log/lynis-report.dat**`.
