# 准备阶段

## 1.查看系统版本

```
[root@centos73-1611 ~]# cat /etc/redhat-release
CentOS Linux release 7.3.1611 (Core)
```

## 2.下载与系统版本一致的 iso 镜像<http://mirror.nsc.liu.se/centos-store/>

# 配置 yum 本地源

## 1.准备挂载路径[mkdir /mnt/iso](#)

## 2.挂载 iso 镜像

```
[root@centos73-1611 xqzhang]# mount CentOS-7.3-x86_64-DVD-1611.iso /mnt/iso
mount: /dev/loop0 is write-protected, mounting read-only
```

## 3.添加本地源 [vim CentOS-Media.repo](#)

```
# CentOS-Media.repo
#
# This repo can be used with mounted DVD media, verify the mount point for
# CentOS-7. You can use this repo and yum to install items directly off the
# DVD ISO that we release.
#
# To use this repo, put in your DVD and use it with the other repos too:
# yum --enablerepo=c7-media [command]
#
# or for ONLY the media repo, do this:
#
# yum --disablerepo=* --enablerepo=c7-media [command]

[c7-media]
name=CentOS-$releasever - Media
baseurl=file:///media/CentOS/
        file:///media/cdrom/
        file:///media/cdrecorder/
        file:///mnt/iso/
gpgcheck=1
enabled=1
gpgkey=file:///etc/pki/rpm-gpg/RPM-GPG-KEY-CentOS-7
```

增加本地源[file:///mnt/iso/](#)，修改[enabled=1](#)

## 4.重建yum缓存

```
yum clean all
```

```
yum makecache
```

# 测试

yum install ftp
