修改docker中mysql配置文件,在mysqld项目下新增port=3307配置

```
[mysqld]
port=3307
federated
max_connections = 200
max_allowed_packet = 64M
pid-file    = /var/run/mysqld/mysqld.pid
socket      = /var/run/mysqld/mysqld.sock
datadir     = /var/lib/mysql
#log-error   = /var/log/mysql/error.log
# By default we only accept connections from localhost
#bind-address  = 127.0.0.1
# Disabling symbolic-links is recommended to prevent assorted security risks
symbolic-links=0
#限制mysql内存占用
#performance_schema_max_table_instances=400
#table_definition_cache=400
#table_open_cache=256

character-set-server=utf8
collation-server=utf8_general_ci
skip-character-set-client-handshake

[client]
default-character-set=utf8

[mysql]
default-character-set=utf8

[mysql.server]
default-character-set=utf8

[mysqld_safe]
default-character-set=utf8
```

之后执行mysql.sh脚本

```
#!/usr/bin/env bash
config_dir=`pwd`
PASSWORD=123456
docker run -d --net host --name solo_mysql \
-p 3307:3307 \
-e MYSQL_ROOT_PASSWORD=$PASSWORD \
-e TZ=Asia/Shanghai \
--restart=always \
-v ${config_dir}/mysqld.cnf:/etc/mysql/mysql.conf.d/mysqld.cnf \
mysql:5.7
exit
```

若容器已经生成，则先停止宿主机mysql服务，之后启动容器，通过docker exec命令进入容器中，改/etc/mysql/mysql.conf.d/mysqld.cnf 配置文件即可
