我的服务器重新启动了一下，发现我的远程的redis连接不上了，然后我登陆上服务器也无法启动，然报错信息为：

```
Job for redis.service failed because the control process exited with error code. See "systemctl status redis.service" and "journalctl -xe" for details.
```

简直不要太头疼，而且我还重装了好几次redis还是没有用，看来硬来是不行的，于是我仔细观察这个误，他让输入“journalctl -xe”来查看详情，于是我输入后便显示：

```
- Subject: Unit redis.service has begun start-up
-- Defined-By: systemd
-- Support: http://lists.freedesktop.org/mailman/listinfo/systemd-devel
--
-- Unit redis.service has begun starting up.
Nov 22 16:32:16 VM_0_13_centos redis-server[30158]: *** FATAL CONFIG FILE ERROR ***
Nov 22 16:32:16 VM_0_13_centos redis-server[30158]: Reading the configuration file, at line 1

Nov 22 16:32:16 VM_0_13_centos redis-server[30158]: >>> 'logfile /var/log/redis/redis.log'
Nov 22 16:32:16 VM_0_13_centos redis-server[30158]: Can't open the log file: Permission denied
Nov 22 16:32:16 VM_0_13_centos systemd[1]: redis.service: main process exited, code=exited, status=1/FAILURE
Nov 22 16:32:16 VM_0_13_centos redis-shutdown[30160]: Could not connect to Redis at 127.0.0.1:6379: Connection refused
Nov 22 16:32:16 VM_0_13_centos polkitd[2500]: Unregistered Authentication Agent for unix-process:30152:6677862 (system bus name :1.2402, object path /org/free
Nov 22 16:32:16 VM_0_13_centos systemd[1]: redis.service: control process exited, code=exited status=1
Nov 22 16:32:16 VM_0_13_centos systemd[1]: Failed to start Redis persistent key-value database.
-- Subject: Unit redis.service has failed
-- Defined-By: systemd
```

```
-- Support: http://lists.freedesktop.org/mailman/listinfo/systemd-devel  
--  
-- Unit redis.service has failed.  
--
```

通过仔细的阅读，说是无法打开 log file因为权限不允许，也就是这句

**Can't open the log file: Permission denied**

那么我们只需要把权限给这个文件就好了，因为这个文件是属于root组的，而运行redis后变成redis的了。

**输入：**

```
chown redis:redis /var/log/redis/redis.log
```

**再次启动redis**

```
systemctl start redis
```

那么你就会发现这次没啥问题了，总结：一定要好好的看日志文件，不要盲目的上网搜索错误，因为上的错误很可能给你的错误并不匹配。
