springboot版本

```
<parent>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-parent</artifactId>
  <version>2.1.12.RELEASE</version>
  <relativePath />
</parent>
```

springCloud版本

```
<dependencyManagement>
  <dependencies>
    <dependency>
      <groupId>org.springframework.cloud</groupId>
      <artifactId>spring-cloud-dependencies</artifactId>
      <version>Greenwich.RELEASE</version>
      <type>pom</type>
      <scope>import</scope>
    </dependency>
  </dependencies>
</dependencyManagement>
```

启动报错

com.netflix.discovery.shared.transport.TransportException: Cannot execute request on any known server

解决方法：在eureka注册中心启动类添加如下代码

```
1 package shop.itbug;
2
3 import org.springframework.boot.SpringApplication;
4
5
6
7
8
9
10 @SpringBootApplication
11 @EnableEurekaServer
12 public class MicroserviceDiscoveryEurekaApplication {
13
14     @EnableWebSecurity
15     static class WebSecurityConfig extends WebSecurityConfigurerAdapter {
16         @Override
17         protected void configure(HttpSecurity http) throws Exception {
18             http.csrf().disable()
19                 .authorizeRequests()
20                 .anyRequest()
21                 .authenticated()
22                 .and()
23                 .httpBasic();
24         }
25     }
26
27     public static void main(String[] args) {
28         SpringApplication.run(MicroserviceDiscoveryEurekaApplication.class, args);
29     }
30 }
31
32
```

```
@EnableWebSecurity
static class WebSecurityConfig extends WebSecurityConfigurerAdapter {
    @Override
```

```
protected void configure(HttpSecurity http) throws Exception {  
    http.csrf().disable()  
    .authorizeRequests()  
    .anyRequest()  
    .authenticated()  
    .and()  
    .httpBasic();  
}  
}
```

eureka server配置文件application.yml

```
server:  
  port: 8761
```

```
spring:  
  security:  
    user:  
      name: user  
      password: 123456
```

```
eureka:  
  instance:  
    hostname: localhost  
  client:  
    register-with-eureka: false  
    fetch-registry: false  
    service-url:  
      defaultZone: http://user:123456@localhost:8761/eureka/
```

👏joy!! 注意 `defaultZone`不要写成`default-zone`，不然也会出错
