<!-- wp:paragraph -->

<p>Galaxy Wearable Store (GWS), the app store for Galaxy wearable devices of Samsung. G
S is strongly region-dependent, just like other aspects of the device (you have to do some <a
href="https://www.reddit.com/r/GalaxyWatch/comments/9nw6s0/tip_changing_region_to_all
w_samsung_pay_access/" class="ek-link">software hacking for a device purchas
d in one region to use Samsung Pay in another region). Being able to run with non-Sam
ung devices means that it cannot rely on the region-of-sale on the phone (and for some reas
n they didn't choose to use the region of the device), GWS decided to use the region of your
SIM card on the device to determine the store location.</p>

<p>This would lead to 2 consequences:</p>
<!-- /wp:paragraph -->

<!-- wp:list -->

You won't have access to the store when you don't have SIM card on your phone
You will lose your access of previous purchases if you swap for a SIM card in another
country (they will come back if you swap back your SIM card).
