## 1.zabbix配置

- /etc/zabbix/zabbix\_agentd.conf

```
##允许使用用户自定义参数  
UnsafeUserParameters=1
```

- /etc/sudoers

```
root ALL=(ALL) ALL  
zabbix ALL=(ALL) NOPASSWD:ALL
```

- 将zabbix用户添加到docker组中

```
gpasswd -a zabbix docker
```

### 1.1 自定义监控脚本

准备工作：使用pip安装相关模块

```
pip install simplejson  
pip install docker==3.1.3
```

注意： pip安装的docker模块版本必须制定3.1.3， 否则下面介绍的监控脚本会运行报错

- /etc/zabbix/zabbix\_agentd.d/docker\_discovery.py 搜集正在运行的容器名称

```
#!/usr/bin/env python  
import os  
import simplejson as json
```

```
t=os.popen("""sudo docker ps |grep -v 'CONTAINER ID'|awk {'print $NF'} """)
container_name = []
for container in t.readlines():
    r = os.path.basename(container.strip())
    container_name += [{"#CONTAINERNAME":r}]
print json.dumps({'data':container_name},sort_keys=True,indent=4,separators=(',',':'))
```

运行结果:

```
python /etc/zabbix/zabbix_agentd.d/docker_discovery.py
```

```
{
  "data":[
    {
      "#CONTAINERNAME":"tomcat"
    }
  ]
}
```

- /etc/zabbix/zabbix\_agentd.d/docker\_monitor.py 输入容器名称和监控项，输出数据

```
#!/usr/bin/env python
import docker
import sys
import subprocess
import os
```

```
def check_container_stats(container_name,collect_item):
    container_collect=docker_client.containers.get(container_name).stats(stream=True)
    old_result=eval(container_collect.next())
    new_result=eval(container_collect.next())
    container_collect.close()
    if collect_item == 'cpu_total_usage':
        result=new_result['cpu_stats']['cpu_usage']['total_usage'] - old_result['cpu_stats']['cpu_usage']['total_usage']
    elif collect_item == 'cpu_system_usage':
        result=new_result['cpu_stats']['system_cpu_usage'] - old_result['cpu_stats']['system_cpu_usage']
    elif collect_item == 'cpu_percent':
        cpu_total_usage=new_result['cpu_stats']['cpu_usage']['total_usage'] - old_result['cpu_stats']['cpu_usage']['total_usage']
        cpu_system_uasge=new_result['cpu_stats']['system_cpu_usage'] - old_result['cpu_stats']['system_cpu_usage']
        cpu_num=len(old_result['cpu_stats']['cpu_usage']['percpu_usage'])
        result=round((float(cpu_total_usage)/float(cpu_system_uasge))*cpu_num*100.0,2)
    elif collect_item == 'mem_usage':
        result=new_result['memory_stats']['usage']
    elif collect_item == 'mem_limit':
        result=new_result['memory_stats']['limit']
    elif collect_item == 'network_rx_bytes':
        result=new_result['networks']['eth0']['rx_bytes']
    elif collect_item == 'network_tx_bytes':
        result=new_result['networks']['eth0']['tx_bytes']
    elif collect_item == 'mem_percent':
```

```
    mem_usage=new_result['memory_stats']['usage']
    mem_limit=new_result['memory_stats']['limit']
    result=round(float(mem_usage)/float(mem_limit)*100.0,2)
return result
if __name__ == "__main__":
    docker_client = docker.DockerClient(base_url='unix://run/docker.sock', version='1.27')
    container_name=sys.argv[1]
    collect_item=sys.argv[2]
    print check_container_stats(container_name,collect_item)
```

运行结果:

```
python docker_monitor.py tomcat cpu_percent
0.1
python docker_monitor.py tomcat mem_percent
2.52
```

## 1.2 自定义监控配置文件

- /etc/zabbix/zabbix\_agentd.d/docker\_discovery.conf

```
UserParameter=docker_discovery,python /etc/zabbix/zabbix_agentd.d/docker_discovery.py
UserParameter=docker_status[*],python /etc/zabbix/zabbix_agentd.d/docker_monitor.py $1
2
```

## 1.3 重启zabbix-agent并测试

```
#监控主机上执行
systemctl restart zabbix-agent
```

```
#zabbix服务器上执行, 在监控主机上执行会提示无权限
zabbix_get -s 127.0.0.1 -p 10050 -k "docker_status[tomcat cpu_percent]"
0.16
zabbix_get -s 127.0.0.1 -p 10050 -k "docker_status[tomcat mem_percent]"
2.52
```

## 1.3 导入docker监控模板

- [Docker-Template.xml](#)

## 2. 效果

### 最新数据

过滤器

主机群组: 在此输入搜索 [选择] 名称: [ ]

主机: Zabbix server [在此输入搜索] [选择] 查看无资料项目

应用集: docker\_discovery [选择] 查看细节

自从: now-1h 到: now [应用]

还剩 1 小时

- 还剩 2 天 昨天 今天 还剩 5 分钟
- 还剩 7 天 前天 今天到目前为止 还剩 15 分钟
- 还剩 30 天 上周的这一天 本周 还剩 30 分钟
- 还剩 3 个月 上一周 本周到目前为止 还剩 1 小时
- 还剩 6 个月 上一个月 本月 还剩 3 小时
- 还剩 1 年 去年 这个月到目前为止 还剩 6 小时
- 还剩 2 年 本年 今年到目前为止 还剩 12 小时
- 今年到目前为止 还剩 1 天

Grid of 8 smaller charts showing various metrics for tomcat:

- tomcat cpu\_total\_usage进程报警
- tomcat mem\_usage进程报警
- tomcat mem\_percent进程报警
- tomcat mem\_limit进程报警
- tomcat cpu\_system\_usage进程报警
- tomcat network\_tx\_bytes进程报警
- tomcat network\_rx\_bytes进程报警
- tomcat network\_io\_bytes进程报警

### 3.问题解决

若遇到权限问题:

```
zabbix_get -s 127.0.0.1 -p 10050 -k "docker_status[netdata cpu_percent]"
```

Traceback (most recent call last):

```
File "/etc/zabbix/zabbix_agentd.d/docker_monitor.py", line 38, in <module>
    print check_container_stats(container_name,collect_item)
File "/etc/zabbix/zabbix_agentd.d/docker_monitor.py", line 8, in check_container_stats
    container_collect=docker_client.containers.get(container_name).stats(stream=True)
File "/usr/lib/python2.7/site-packages/docker/models/containers.py", line 833, in get
    resp = self.client.api.inspect_container(container_id)
File "/usr/lib/python2.7/site-packages/docker/utils/decorators.py", line 19, in wrapped
    return f(self, resource_id, *args, **kwargs)
File "/usr/lib/python2.7/site-packages/docker/api/container.py", line 721, in inspect_contain
r
    self._get(self._url("/containers/{0}/json", container)), True
File "/usr/lib/python2.7/site-packages/docker/utils/decorators.py", line 46, in inner
    return f(self, *args, **kwargs)
File "/usr/lib/python2.7/site-packages/docker/api/client.py", line 194, in _get
    return self.get(url, **self._set_request_timeout(kwargs))
File "/usr/lib/python2.7/site-packages/requests/sessions.py", line 543, in get
    return self.request('GET', url, **kwargs)
File "/usr/lib/python2.7/site-packages/requests/sessions.py", line 530, in request
    resp = self.send(prepare_request(**send_kwargs))
File "/usr/lib/python2.7/site-packages/requests/sessions.py", line 643, in send
    r = adapter.send(request, **kwargs)
File "/usr/lib/python2.7/site-packages/requests/adapters.py", line 498, in send
    raise ConnectionError(err, request=request)
requests.exceptions.ConnectionError: ('Connection aborted.', error(13, 'Permission denied'))
```

请检测zabbix-agent机器的selinux是否处于关闭状态:

```
[root@online-12 ~]# sestatus
SELinux status:      disabled
[root@online-12 ~]# getenforce
Disabled
```

若显示Permissive或enabled状态,则需要关闭selinux:

```
[root@data-backup zabbix_agentd.d]# sestatus
SELinux status:      enabled
SELinuxfs mount:     /sys/fs/selinux
SELinux root directory: /etc/selinux
Loaded policy name:   targeted
Current mode:         permissive
Mode from config file: disabled
Policy MLS status:    enabled
Policy deny_unknown status: allowed
Max kernel policy version: 31
[root@data-backup zabbix_agentd.d]# getenforce
Permissive
```

关闭方法:

- 临时关闭:

```
[root@localhost ~]# setenforce 0
```

- 永久关闭,可以修改配置文件/etc/selinux/config,将其中SELINUX设置为disabled,之后重启电脑可生效。

```
[root@localhost ~]# cat /etc/selinux/config
```

```
# This file controls the state of SELinux on the system.
# SELINUX= can take one of these three values:
#   enforcing - SELinux security policy is enforced.
#   permissive - SELinux prints warnings instead of enforcing.
#   disabled - No SELinux policy is loaded.
#SELINUX=enforcing
SELINUX=disabled
# SELINUXTYPE= can take one of three two values:
#   targeted - Targeted processes are protected,
#   minimum - Modification of targeted policy. Only selected processes are protected.
#   mls - Multi Level Security protection.
SELINUXTYPE=targeted
```

```
[root@rdo ~]# sestatus
SELinux status:      disabled
```

若上述操作中没有将zabbix用户添加进docker组中, 执行命令后必须得重启zabbix-agent才能生效
