现代前端技术体系，你怎么看

前端技术发展太快了，是良性发展么？

一个是 Tom MacWright 对现代前端的二次思考，吐槽框架给当代前端带来的一些问题

https://macwright.org/2020/05/10/spa-fatigue.html

一个是捍卫现代前端技术体系

https://dev.to/richharris/in-defense-of-the-modern-web-2nia

有的人认为当代前端技术体系，比如Vue、React等框架，带来的困惑就是工具或构建过程的复杂程越来越高了，不像以前直接谢谢 HTML、CSS、JS，再加上一个nginx，基本上完成了网页开发。（达的意思就是目前开发者更要关注构建、配置等）

我个人理解目前的三大框架都是非常休息的，基本上隐藏了配置构建复杂性

但因为我不是构建专家，所以当我需要定制化配置的时候，就需要了解构建工具，包括Babel转化等，我不是专家，所以当我需要了解的时候，我会话很多时间，并且很头疼~trollface

Some interesting thoughts, in the original article and your response. Certainly good for generating discussion :)

> It will take more than technological advancement to get the web there; it will take a cultural shift as well. But we certainly can't get there if we abandon our current trajectory.

The problem as I see it is that the web -- in terms of client-side executed markup and code (HTML/CSS/JavaScript) just wasn't designed with these kinds of interactions in mind (the interactions that Ryan Florence highlighted). It's the wrong foundation for it.

I don't think that "getting there" should be through bending original web technologies, but rather with something else entirely -- perhaps WebAssembly, or a return to actual native applications much like we've come to depend on on our tablets and phones. We already can do nice animations like that iPad demo with native desktop applications. There's many advantages to websites over native desktop apps, with the standout one being that they don't require someone to install an application on their machine. Maybe WebAssembly can give us a compromise -- desktop apps built with technology designed for that job, but available in a way that doesn't require any local installation. Then we can use tools that were purpose built for those kinds of tasks, instead of trying to wrangle the foundations of the web to fit something they were never built for.

When I think back to how we used to build websites back in the day, and how we build sites with technologies in tools like React now, I'm honestly not sure that we've gained anything of great enough value relative to the simplicity we've lost. In short, I'd be happy to abandon our current trajectory and put our hope in alternative solutions for those situations where what we really need is a native application. Leave the web for what it's good at.

很好奇，大家对于当代前端技术体系有什么想法么？
