用 CSS 样式控制显示出来吗? 尝试一下

<code class="highlight-chroma"><span class="highlight-line"><span class="highlight cl"><style&gt;

</span></span><span class="highlight-line"><span class="highlight-cl"> .tab-content{ </span></span><span class="highlight-line"><span class="highlight-cl"> overflow-x: scroll;

</span></span></span><span class="highlight-line"><span class="highlight-cl"> width: 300 px;

</span></span></span><span class="highlight-line"><span class="highlight-cl"> } </span></span><span class="highlight-line"><span class="highlight-cl"> &lt;/style&gt;

</span> </span> </code>

添加该样式后显示不正确。<br>

暂且在 list.jsp 中添加:

<code class="highlight-chroma"><span class="highlight-line"><span class="highlight"</pre> cl"><style&at; </span></span></span><span class="highlight-line"><span class="highlight-cl"> .tabs-contain r.tab-content > .active, </span></span><span class="highlight-line"><span class="highlight-cl"> .tabs-contain r.pill-content > .active { </span></span></span> class="highlight-line"><span class="highlight-cl"> display: bl ck; </span></span><span class="highlight-line"><span class="highlight-cl"> overflow-x: auto; </span></span></span><span class="highlight-line"><span class="highlight-cl"> width: 300 px; </span></span><span class="highlight-line"><span class="highlight-cl"> } </span></span><span class="highlight-line"><span class="highlight-cl"> </style&gt; </span></span></code> <hr> <h3 id="15---回填信息显示问题">15. <code>gridselect</code> 回填信息显示问题</h3> <img src="https://ld246.com/images/img-loading.svg" alt="image.png" data-src="https: /b3logfile.com/file/2019/05/image-013618d2.png?imageView2/2/interlace/1/format/webp" >回填信息显示问题: <br> 原因可能是 XML 中对应字段配置不正确时,则会导致 gridselect 选择某条记录确认后,但是数据不 回填到文本框中。<br> 解决办法: <0><ki labelname 和 labelValue 中的值正确; </li> 保证 XML 中查询关联字段对应的 gridselect 相对应的正确。 另外,发现此处的回显只能显示一个对象中的直接字段的值,不能显示一个对象中的对象中的 段的值。 </0|><hr> <h3 id="16--">16. <code>SQLException: Connection is read-only.</code></h3> <blockquote> <a href="https://ld246.com/forward?goto=https%3A%2F%2Flink.hacpai.com%2Fforwar %3Fgoto%3Dhttps%253A%252F%252Fwww.cnblogs.com%252Fsimpledev%252Fp%252F4261 96.html" target=" blank" rel="nofollow ugc">java.sql.SQLException: Connection is read-only. Queries leading to data modification are not allowed </a></blockguote> <解决方法:事务配置在 service 层,但是你的 service 层的方法是 query 开头的, service 调用的 query 方法根本就没有事务。你的配置文件下面是不是还有关于 query\*的配置成了 read-only? 修 你 service 方法的开头变成不是 read-only 的那种配置,如 clear 开头。(在 query 方法名(read onl) )里面执行了 update 操作,所以就报错了。) <code class="highlight-chroma"><span class="highlight-line"><span class="highlight</pre> cl">//删除转化出现异常时已经插入的数据记录 </span></span></span><span class="highlight-line"><span class="highlight-cl"> @Transactional( eadOnly = false) </span></span></span><span class="highlight-line"><span class="highlight-cl"> public void dele eERecord(LevelForMajors levelForMajors){ </span></span><span class="highlight-line"><span class="highlight-cl"> mapper.dele eERecord(levelForMajors); </span></span></span></span>class="highlight-line"></span class="highlight-cl"> } </span></span></code> <hr> <h3 id="17---jeeplus-中想实现下拉多选功能要怎么实现-">17. jeeplus 中想实现下拉多选功能要

么实现? </h3>

从字典取数据:

<code class="highlight-chroma"><span class="highlight-line"><span class="highlight cl"><td class="active"&gt;&lt;label class="pull-right"&gt;类型:&lt;/label&gt;&lt;/td&gt; </span></span><span class="highlight-line"><span class="highlight-cl"> &lt;td&gt;

</span> </span

</span></span></span></span></span>class="highlight-line"><span class="highlight-cl"> &lt;form:optio s items="\${fns:getDictList('employee\_type')}" itemLabel="label" itemValue="value" htmlEsca e="false"/>

</span></span></span><span class="highlight-line"><span class="highlight-cl"> &lt;/form:selec &gt;

</span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></span></

这个是查询数据库的<br>

<img src="https://ld246.com/images/img-loading.svg" alt="QQ 图片 20190626151006.png" ata-src="https://b3logfile.com/file/2019/06/QQ%E5%9B%BE%E7%89%8720190626151006-4 4b4ed2.png?imageView2/2/interlace/1/format/webp">

要在多选框中搜索的话可以使用 select2 插件。

<blockquote>

</blockguote>

<hr>

<h3 id="18---从数据库导入项目中的表然后生成的模块后-这模块的-list-jsp-页面会报错-">18. 从据库导入项目中的表然后生成的模块后,这模块的 list.jsp 页面会报错: </h3>

<img src="https://ld246.com/images/img-loading.svg" alt="QQ 图片 20190626151247.p g" data-src="https://b3logfile.com/file/2019/06/QQ%E5%9B%BE%E7%89%872019062615124 -4a3fe2dc.png?imageView2/2/interlace/1/format/webp">

<img src="https://ld246.com/images/img-loading.svg" alt="QQ 图片 20190626151252.p g" data-src="https://b3logfile.com/file/2019/06/QQ%E5%9B%BE%E7%89%872019062615125 -a2653062.png?imageView2/2/interlace/1/format/webp">

<strong>解决办法:手动在方法中为 Model 添加一个 对象。</strong>

<img src="https://ld246.com/images/img-loading.svg" alt="QQ 图片 20190626151424.p g" data-src="https://b3logfile.com/file/2019/06/QQ%E5%9B%BE%E7%89%872019062615142 -4afcd967.png?imageView2/2/interlace/1/format/webp"> <hr>

<h3 id="19---慎用-">19. 慎用 <code> select \*</code></h3>

>当自己手写一些 SQL 时,如果查找的对象/表中有封装了其他对象,那么,当 SQL 中有 <code>elect \*</code> 时会导致封装对象为 Null 的现象。<br>

因此,如果有会使用到封装的对象,那么 XML 中的 SQL 还是加上映射关系吧。<strong>eg</strong>:

<code class="highlight-chroma"><span class="highlight-line"><span class="highlight cl"><!-- 根据年份、省份、高校、文理科、批次查找记录 findListByYPNWB --&gt;

</span></span></span><span class="highlight-line"><span class="highlight-cl"> &lt;select id="fi dListByYPNWB" resultType="Eucode" >

</span></span></span><span class="highlight-line"><span class="highlight-cl"> </span></span><span class="highlight-line"><span class="highlight-cl"> <include re <include re

</span></span></span><span class="highlight-line"><span class="highlight-cl"> FROM e\_uec de a

</span></span></span><span class="highlight-line"><span class="highlight-cl"> &lt;include re id="EucodeJoins"/>

</span></span></span></span> class="highlight-line"> <span class="highlight-cl"> WHERE a.yea = #{year} AND a.province = #{province.id} AND a.universityid = #{university.id} AND a.wltype = #{wltype} AND a.schoolbatches = #{schoolBatches} AND (a.r3 != "2" OR ISNULL(a.r3)) AND a.r3 != "3" OR ISNULL(a.r3))

</span></span></span></span></span></span></span></span></code></span></span></code>

<h3 id="20--关联查询--语句中使用--且关系过滤会极大降低查询效率">20. 关联查询 <code>WHE E</code> 语句中使用 <code>AND</code> 且关系过滤会极大降低查询效率</h3>

关联查询中如果使用了如下注释中的关联,则会造成查询花费时间很长。1.38s --> 0.014s

<code class="highlight-chroma"><span class="highlight-line"><span class="highlight cl">LEFT JOIN m\_rank majorrank ON majorrank.id = a.majorrankid

</span></span></span><span class="highlight-line"><span class="highlight-cl">-- (

</span></span></span><span class="highlight-line"><span class="highlight-cl">-- majorrank.ma orid = emcode.levelformajorsid

</span></span></span><span class="highlight-line"><span class="highlight-cl">-- AND majorra k.universityid = emcode.universityid

</span></span><span class="highlight-line"><span class="highlight-cl">-- )

</span></span></code>
