1. 配置yum源 (阿里云)

1. 安装wget

```
yum install -y wget
```

2. 备份/etc/yum.repos.d/CentOS-Base.repo文件

```
cd /etc/yum.repos.d/  
mv CentOS-Base.repo CentOS-Base.repo.back
```

3. 下载阿里云的Centos-6.repo文件

```
wget -O CentOS-Base.repo http://mirrors.aliyun.com/repo/Centos-7.repo
```

4. 重新加载yum

```
yum clean all  
yum makecache
```

2. 安装docker

```
yum install docker -y
```

1. 启动docker

```
systemctl start docker #启动docker  
systemctl enable docker #开机启动docker  
systemctl status docker #查看docker状态  
docker version #查看docker 版本
```

2. 设置加速器

```
curl -sSL https://get.daocloud.io/daotools/set_mirror.sh | sh -s http://95822026.m.daocloud.io  
systemctl restart docker #重启docker
```

设置完daocloud报错

Job for docker.service failed because the control process exited with error code. See "systemctl status docker.service" and "journalctl -xe" for details.

看了下 /etc/docker/daemon.json

因为设置daocloud实际上是修改了/etc/docker/daemon.json这个文件，所以有可能是这个文件有问题，

```
cat /etc/docker/daemon.json  
{ "registry-mirrors": ["http://95822026.m.daocloud.io"], }
```

果然，json格式不对，去掉逗号后就正常了
