

请问在哪里设置编辑器初始值 (setValue) , after 也不成功?

版本号：

"vditor": "^3.8.3",

目前已尝试如下方法：

new对象之后初始化

```
this.vditor = new Vditor('vditor', options);
this.vditor.focus();
```

设置内容初始化：

```
this.vditor.setValue('# 这是初始内容', false);
```

不成功，报如下错误：

```
Cannot read property 'SpinVditorSVDOM' of undefined
```

参考了如下帖子：

<https://github.com/Vanessa219/vditor/issues/273#issuecomment-609386420>

<https://github.com/Vanessa219/vditor/issues/523>

说是在after()里设置，但是after里面，也设置不成功，vditor对象还是undefined的状态。

代码：

```
request.onload = that.onloadCallback;
    request.send(formData);
}
},
after() {
    console.log('--- init content ---');
    // vditor.setValue('# 哈哈', true);
    if (this.vditor) {
        console.log('---- ok vditor --');
    } else {
        console.log('--- empty vditor ---');
    }
}
```

控制台输出 empty vditor。

The screenshot shows the Chrome DevTools interface with the 'Console' tab selected. On the left, a sidebar lists log levels: '3 messages', '2 user mes...', 'No errors', '1 warning', and '2 info'. The 'warning' entry is expanded, revealing a yellow-highlighted warning message: '⚠ [Deprecation] Synchronous XMLHttpRequest on to the end user's experience. For more help,' followed by a blue link '>'. Above the sidebar, the status bar displays 'DevTools'. The main console area shows two log entries: '--- init content ----' and '--- empty vditor ---'.

Level	Message
3 messages	--- init content ----
2 user mes...	--- empty vditor ---
No errors	⚠ [Deprecation] Synchronous XMLHttpRequest on to the end user's experience. For more help,
1 warning	>
2 info
