Vue3 数据延迟显示

问题

本人前端小白,学了一段时间Vue3.

为了适配自己的笔记在写一个插件.但是中见遇到了一些问题.我也不懂这是个什么问题.

```
SELECT * FROM blocks WHERE
content like '%@Project-%'
```

查询   保存

name	area	state	priority	deadline

No Data
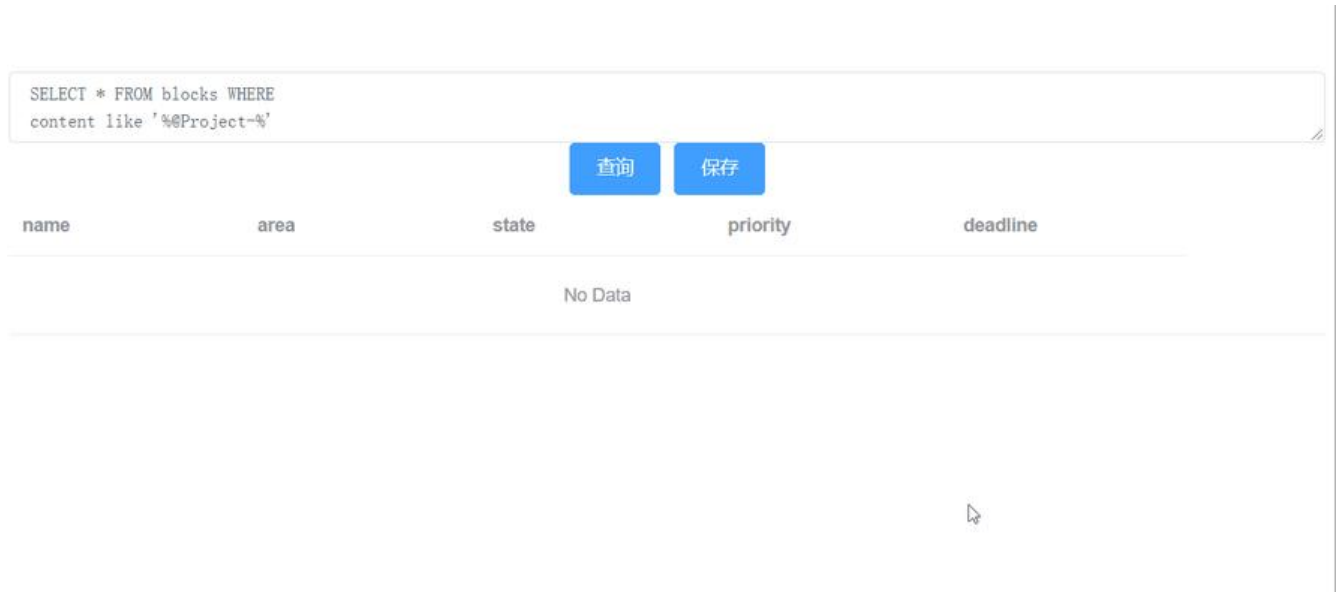

必须要点击两次查询才能够显示数据.

<template> 部分是用Element-Plus写的.只是简单的绑定了一下数据.

JS部分的代码

```javascript
setup(){
  let blocks = ref()
  let sqlcode = ref("SELECT * FROM blocks WHERE\n" + "content like '%@Project-%'")

  let currentId= ""
  let attributes=ref([])
  let blocksAttrs=ref([])

  //执行SQL
  function getQueryResult() {
    sqlQuery(sqlcode.value).then(response => {
      blocks.value = response.data
      //获取其属性
      getAttr(blocks.value)
    })
  }
  //查询块的属性
  function getAttr(getBlocks){
    let block=null
    for (block in getBlocks){
      getBlockAttrs(getBlocks[block].id).then(response => {
        if (response.data.length != 0){
          attributes.value.push(response.data)
```

```
            }
        })
    }
    setDataView(attributes.value)
}
//将属性放入对象数组
function setDataView(getAttributes){
    console.log("DataViewStart")
    let attr=null
    let attrs
    console.log(getAttributes)
    for(attrs in getAttributes){
        let blockAttrs={}
        for(attr in getAttributes[attrs]){
            let attrKey = getAttributes[attrs][attr].name
            let attrResult = getAttributes[attrs][attr].value
            blockAttrs[attrKey] = attrResult
        }
        blocksAttrs.value.push(blockAttrs)
    }
    console.log(blocksAttrs.value)
    }
}
```
