<p>文档/笔记本误删可以在 data 文件夹下.siyuan 的隐藏文件夹内查看</p>

<p>隐藏文件夹查看命令：ls -a</p>

<p>找到 history 文件并恢复即可。</p>

<p>权限控制方案：</p>

<p>首先：chattr +a 20220507141330-gite51x 即可控制该笔记本只可修改文件夹内文件，可新增不可删除。笔记本内修改内容正常。</p>

<p>自动化运维方案：</p>

```
<pre><code class="language-bash highlight-chroma"><span class="highlight-line"><span class="highlight-cl">sudo -i</span></span><span class="highlight-line"><span class="highlight-cl"><span class="highlight-nb">cd</span> /var/lib/docker/overlay2/<span class="highlight-o">[</span>ID<span class="highlight-c">=<span class="highlight-cl">ID<span class="highlight-o">]</span></span>/diff/home/siyuan/Documents/SiYuan/data</span></span><span class="highlight-line"><span class="highlight-cl">chattr -a 20220507173948-586wlx6</span></span><span class="highlight-line"><span class="highlight-cl"><span class="highlight-nb">cd</span> 20220502173948-586wlx6</span></span><span class="highlight-line"><span class="highlight-cl">rm -rf *.tmp</span></span><span class="highlight-line"><span class="highlight-cl"><span class="highlight-nb">cd</span> ..</span></span><span class="highlight-line"><span class="highlight-cl">chattr +a 2022052173948-586wlx6</span></span><span class="highlight-line"><span class="highlight-cl"><span class="highlight-nb">exit</span></span></span></span><span class="highlight-line"><span class="highlight-cl"><span class="highlight-nb">exit</span></span></span></code></pre>
```

<p>保护某几个文档的方案</p>

<p>将 rm -rf *.tmp 改为</p>

```
<pre><code class="language-bash highlight-chroma"><span class="highlight-line"><span class="highlight-cl"><span class="highlight-nb">shopt</span> -s extglob</span></span><span class="highlight-line"><span class="highlight-cl">rm -rf !<span class="highlight-o">(</span>file1<span class="highlight-p">|</span>file2<span class="highlight-o">)</span></span></span></code></pre>
```

<p>最后类似这样，运维起来就特别方便了</p>

<p></p>
